

Trading in Harmony with Any Market

Course Duration: 8 hours

Learning Outcomes

In this workshop, participants will learn to identify low risk high probability action zone to initiate trade, with an exit strategy comprising both a stop loss and a profit taking level

Who Should Attend

- Bankers
- Research Analysts, Fund Managers
- Institutional Investors, Investment Advisors
- Traders, Dealers & Remisiers
- Industry Related Professionals

Course Outline

In a directional trending market, there are essentially two zones where traders can locate low risk, high probability trading opportunities. In an up trend market, traders can look to buy undervalued dips, or look to buy the explosive move after a resting period is over.. The correct terminology is to buy the end of a corrective decline in an uptrend, or to buy a breakout when the stages a strong run.

Section A: Understanding the Correction Phase of Market Behaviour

In this session, we seek to understand how markets behave when they consolidate or correct, as opposed to when they are strongly impulsive. The aim is to learn how to identify a sideways correction. This requires the use of a moving average to identify the time frame of the market trend, and then to learn how to look out for the relatively smaller corrections as opposed to the relatively larger directional impulsive waves.

The student is then taught to locate the significant swing highs and swing lows within the correction phase. Once this can be done, the student is taught to observe the market action when prices move to the sideways top and to the sideways bottom. With the understanding of how markets behave at the sideways support and resistance, the student is shown how to calculate the Primary Buy Zone, and the Primary Sell Zone of the sideways range pattern.

Course Outline cont.

Section B: Understanding the Breakout Phase of Market Behaviour

- This session will look specifically at how markets behave when they successfully exit, or break out of the sideways range, changing from a resting mode into a directional impulse. The aim is to learn how to identify the conditions under which successful breakouts can occur. Again, this requires the use of a moving average to identify the timeframe of the market trend, and then to learn how to look out for the higher timeframe perspective.

Trading in Harmony with Any Market

Training Methodology

- Lecture style, with case studies & charting software

Training Requirements

- Participants are not required to be able to learn calculate Moving Averages, Average True Range, RSI and Stochastic with a calculator or by using Excel. To have a software to further enhance your workshop learning experience is advisable but optional.

Speaker's Profile

Mr. Jeffery Tie joined Refco Singapore in 1997. During this time he developed new expertise in International Futures Markets and FX. Jeffery's experience and training during his time at both Stock Broking and Futures Broking enhanced his understanding of Technical Analysis and Trading. This expertise was augmented by his association and friendship with Ray Barros, a well known Fund Manager and Trading Coach. Jeffery's expertise in Technical Analysis was recognized by the Singapore Exchange who has invited Jeffery to its panel of Educators. Jeffery consistently gets very positive feedback from local as well as foreign attendees of his seminars and courses. Besides Singapore, Jeffery has spoken to International audiences in Jakarta, Mumbai and Sri Lanka.

He was responsible for the content and presentation of CMC's educational programmes. In September 2007, Jeffery resigned from CMC, and currently focuses on both trading and conducting Technical Analysis courses and workshops with the SGX, and the Financial Training Institute @ Singapore Management University.
